Education

École Polytechnique

Computer Science, Ph.D

Paris, France

October 2011 — May 2015

Federal University of Minas Gerais

Computer Science, Master's degree

Minas Gerais, Brazil

March 2009 — July 2011

Pontifical Catholic University of Minas Gerais

Computer Science, Bachelor's degree

Minas Gerais, Brazil

August 2004 — August 2008

Ph.D thesis

Title: *From Your Routine to Better Network Services* 🔗

Supervisor: Aline C. Viana ✉

Description: Investigated characteristics of human mobility and their impact on the network data traffic, planning and deployment. I've analyzed large-scale datasets from mobility and traffic demands generated by millions of users. Several parallelization techniques were used to summarize and assess massive amounts of data. Python multiprocessing, thread and R multicore libraries were largely employed.

Results: 5 conference papers were published, 3 journal papers are in submission, and a data traffic simulator was created.

Master's thesis

Title: *Centrality-based Routing for Wireless Sensor Networks*

Supervisors: Antonio A. F. Loureiro ✉ and Heitor S. Ramos ✉

Description: Aimed to use centrality information on the design of routing algorithms for Wireless Sensor Networks. Two new topological metrics were proposed, distributed algorithms to calculate them, and a tree-based routing algorithms that take advantage of them. Simulators Castalia (C++) and Sinalgo (Java) were used.

Results: 1 conference and 1 journal paper published.

Bachelor's thesis

Title: *Data Codification, Fusion and Communication in Wireless Sensor Networks*

Supervisors: Raquel A. F. Mini ✉ and Pedro O. V. Melo ✉

Description: Aimed to create a wireless sensor's application for fire detection using a real dataset of weather measurements. A novel way to make data fusion, and codification was proposed. Simulation used NS 2 (C++ and TCL).

Results: 1 conference paper published.

Professional Experiences

Orange

Postdoctoral Researcher

Paris, France

June 2015 – Nowadays

Developing techniques for geolocalized Radio Engineering in order to improve the mobile network's KPIs.

Dito Internet

Software Engineer

Minas Gerais, Brazil

July 2011 — September 2011

Part of a Ruby on Rails team developing a Telecom Italia Mobile's project called Tim Beta, timbeta.com.br.

Telecom Italia Future Centre

Intern

Developed, in Python, code for a project called Future of Enterprises. The main objective was to improve the real-time interaction among employees.

Venice, Italy

November 2010 — May 2011

Task Internet

Systems Analyst

Ruby on Rails development of a social network.

Minas Gerais, Brazil

February 2008 — February 2009

Web Applications

Easy Bike – <http://easy.bike>

Ruby, Python, and Javascript

It finds the best cycling routes using bike-sharing systems in more than 300 cities distributed in more than 40 countries. It considers real-time information of how many bicycles are available closest to you and how many available bike stands are available in the stations close to the destination address. It then chooses the best stations and route for you. Besides, it provides city-specific domains such as paris.easy.bike, london.easy.bike, or ny.easy.bike, etc., to directly access the service in the respective cities.

Proconfie – <http://www.proconfie.com>

Ruby, Python, and R

It helps people to choose companies based on historical problems presented with other customers. Received Honorary Mention award from the Brazilian Ministry of Justice. Refer to Section [Awards](#) for further information.

CEP Aberto – <http://www.cepaberto.com>

Ruby, Python, and Javascript

Collaborative application that aims to publicly open the Brazilian Postal Code (CEP) data. It currently contains information of about 1 million CEPs. It provides an API for developers willing to use geolocalized Postal Code data and, for the end-users, the possibility to edit, add, fix, follow, etc, specific postal-coded-locations in order to improve the quality of the data.

Some Open Source Projects

Twitter applet – Code

Twitter applet for Cairo-Dock with real-time personal tweet alert and many of the capabilities provided by Twitter's API.

WebSearch applet – Code

Metasearch applet for Cairo-Dock capable of retrieving text and image results from several sources, e.g., Google, Bing, Yahoo!, Youtube, and Twitter.

Repeat One Song – Code

The Repeat One Song feature for Rhythmbox.

Translator – Code

Full-featured Google Translator-based translator applet for Cairo-Dock.

Quote – Code

"Quote of the day" applet for Cairo-Dock. It crawls internet sources, e.g., Bash.org, Xkcd.com, Qdb.us, and more.

Languages

Portuguese: Native speaker

English: Fluent

French: Advanced

Italian: Advanced

Skills

Language: Python, Ruby, R, and Javascript

Framework: Ruby on Rails and jQuery

VCS: Subversion, Git, and Bazaar

DB: MySQL, and PostgreSQL

OS: Linux

Others: Full-stack, REST API, Web crawlers, and D-Bus

Awards

Honorary mention

Brazilian Ministry of Justice

May 2013

Open Data Applications Contest. Lead developer of a Ruby on Rails application called Proconfe. Refer to Section [Web Applications](#) for more details about this application.

Silver Medal

Pontifical Catholic University of Minas Gerais

July 2008

Second best overall score during the bachelor.

Honorary mention

Pontifical Catholic University of Minas Gerais

May 2007

For the work “*Game Theory in Decision Making in Wireless Sensor Networks*” presented in the 15th Sciences Seminar.

Intel Recruitment team

October 30, 2015

Dear Sir or Madam,

I am a Ph.D. in Computer Science at École Polytechnique, France. My Thesis investigate how the routinary characteristics of human mobility affect urban network traffic demands. Besides, I am Linux and Open Source enthusiast for 15 years now. I have **several projects**, created on my spare time.

Furthermore, willing to help people using my knowledge, I have started **three web applications**. Briefly, the first, "*Easy.Bike*" is a free application that helps bike-sharing cyclers to find the best bicycle stations and route from their places to their destinations. The second, "*Proconfie*", is a free application that helps people to choose companies based on historical problems presented with other customers. It received Honorary Mention award from the Brazilian Ministry of Justice. Finally, "*CEP Aberto*" (*Open Postal Code*) is a free and collaborative application that aims to open publicly the Postal Code geolocalized data in Brazil, which even after several popular requests, can be only accessed by those who pay an absurd amount of money for the Brazilian Post-mail service. It provides an API for developers willing to use the Postal Code data and, for the end-users, the possibility to edit, add, fix, follow, specific postal-coded-locations in order to improve the quality of the data.

I have worked and experienced multicultural environments. I was born in Brazil, coursed part of my Master's Degree in Italy and, since 2011, I live in France. Besides Portuguese, I speak English, French, and Italian.

I am looking for a job in which I can apply my knowledge to do something that can positively change a huge amount of people's lives. I would like to do that full-time, not only during my spare time, an that is why I am applying for this position at Intel.

Yours faithfully,

Eduardo M. R. Oliveira
